SW-1208

Silicone Polyether Leveling Agent

2026/10/08 Draft. **PDS**

Description

SW-1208 is a polyether-modified silicone leveling agent designed for agricultural applications. It provides excellent wetting, leveling, and spreading properties, while its strong hydrophilicity promotes uniform water distribution on leaf surfaces.

SW-1208 improves the application efficiency and coverage of agricultural products, making it an effective adjuvant for agricultural applications.

Characteristics

- Agricultural adjuvant for leveling and spreading applications
- Surface treatment agent
- Excellent wetting and penetrating properties
- Improves leveling and penetration while reducing surface tension
- Significantly improves surface smoothness and uniformity
- Reduces the impact of bubbles for more uniform application
- Excellent spreading performance for uniform coverage
- Excellent compatibility with other formulations

Properties

Appearance	Transparent to hazy yellowish liquid
Active ingredient(%)	100.0%
Diluent	Water

- **Modified cationic, can be mixed with most anionic components**
- **SW-1208 without any water-based solvents added whatsoever**

Safety

This document does not contain the safety information required for the product. Please read the safety data sheet for this product before use.

Storage & packaging

When stored in its originally sealed packaging at 5°C - 40°C, this product may be stored for up to 8 months from its manufacturing date. Comply with the storage instructions marked on the packaging. Once past this expiration date, TAI COUNTY CHEMICAL no longer guarantees that the product meets the sales specifications.

Product comes in 20kg HDPE blue drums loading 100KG(All breathable).

Applications

- SW-1208 is recommended to be diluted with water at a 20% ratio using the following procedure (using a paddle mixer):

SW-1208	:100 KG
Water(1)	:20 KG
Water(2)	:70 KG
Water(3)	:35 KG
Water(4)	:225 KG
Total	:450 KG

Processing

1. Add 100KG of SW-1208 product and slowly introduce 20KG of water (1), stirring until the liquid becomes gradually thickened (first turning point).
2. After the first turning point, add 70KG of water (2) and continue stirring until the consistency transitions from thickened to reduced viscosity resembling water (second turning point).
3. Following the second turning point, add 35KG of water (3) and continue stirring until thoroughly and uniformly mixed. This is the dilution method for a 40% emulsion.
4. **Diluted to 40%, the appearance is transparent to slightly turbid emulsion. If a transparent appearance is required, please add an appropriate amount of water-based solvents such as IPA, Sorbitol, etc.**
5. **Adding an additional 225 kg of water (4) will dilute it to a 20% emulsion with a slightly blue-tinted translucent appearance.**
6. Filter the mixture before packaging, recommended usage is 2-5%.

(Depending on the actual conditions, you can adjust the usage amount.)

The information contained in this manual is given based on our current knowledge and good faith. It is indicative only and not binding, especially regarding the impact on third-party rights during product use. TAI COUNTY CHEMICAL ensures the products it sells conform to specifications. Only necessary preliminary tests can determine if a product is suitable for specific applications, and this information cannot replace such tests. Users are responsible for ensuring compliance with local legislation and obtaining necessary usage certificates and authorizations. Users are requested to check if they have the latest version of this document, and TAI COUNTY CHEMICAL is always ready to provide additional information to customers.
